

ANNEX 1 – Session Summary Template

SESSION 3.C.1

Media-friendly title (suggested by the co-organizers)	From water use efficiency to stewardship: how to engage industry sector on water-related risks and opportunities
Working title	From water use efficiency to stewardship: Is industry aware of its water-related risks and opportunities?
Key question	How can we work together to ensure solutions and better practices for industry on water security and management?
Media-friendly session summary (3-5 sentences)	Participatory models and the engagement in water stewardships can contribute to business sustainability and water security with an inclusive and sustainable growth strategy. Case studies provide practical inspirations in better managing of water-related risks and opportunities within the private sector.
Session description (150 words)	This session will focus on the challenges and opportunities of engaging in water stewardship, including the presentation of successful initiatives from private and public sectors. Water stewardship is a simple concept but challenging to implement effectively. It goes beyond individual business efficiency, requiring a wider vision of the water resource. Stewardship requires an understanding of the resource's context, how it is shared, and how water users' activity is affected by and affects other water users and the environment in general. The engagement in water stewardships can contribute to business sustainability and water security, within an inclusive and sustainable growth pattern.
